## Education

<b>Institute of Astronomy, University of Cambridge</b> <i>PhD (Astronomy)</i> <b>Advisor:</b> Dr. Jonathan R. Gair; <b>Thesis Title:</b> <i>Exploring the cosmos with gravitational waves</i> <b>Description:</b> A new Bayesian hierarchical modelling scheme is introduced to use compact-binary gravitational-wave standard sirens to infer the mass-distribution of the binary population, the progenitor star-formation rate, and cosmological parameters. Advanced pulsar-timing array techniques are developed to map the nanohertz gravitational-wave sky through a parametrized overlap-reduction function, and large accelerations to the Bayesian inference of single supermassive black-hole binary searches are proposed.	<b>Cambridge, UK</b> <i>2010–2014</i>
<b>University of Oxford</b> <i>MPhys (1<sup>st</sup> Class), [ranked 1<sup>st</sup> in Jesus College, 4<sup>th</sup> across University]</i> <b>Advisor:</b> Prof. Steven Rawlings; <b>Thesis Title:</b> <i>The Cosmic Evolution Of Black-hole Accretion</i>	<b>Oxford, UK</b> <i>2006–2010</i>
